

XM Radio cant help that it does Radio better then the average station! By limiting there broadcast abilities your limiting technological advancement that we all strive for daily. The world would be a boring place without these advancements. Without them we wouldnt be communicating now thru this monitor and keyboard.

XM provides one of the best entertainment values in America. With every other form of Media increasing daily XM is the only true pure venue left....

Although I dont live in a state or City were Weather and Traffic is a value to me. I do how ever travel thru some of these cities from time to time as my job forces me to be on the road 90% of the time traveling . Valuable tool to a driver and to stifle that valuable knowledge makes absolutly no sense. Knowledge is power and there is NO reason XM should be not allowed to pass this knowledge on to it's CONSUMERS. We pay for this information. If you regulate that regulate the internet, broadcast TV, broadcast radio and well every other form of media out there because last time I checked it was AMERICA and this form of media was protected under the first amendment... Freedom of what? SPEECH.....
